1. This is slide agglutination test. Widal test by tube method is more specific and recommended test.
2. This is only screening test and definite diagnosis should not be based upon this single test.
3. 'H' titre > 1:160 and 'O' titre > 1:80 are positive however the treatment should be started based upon the clinical symptoms and other supplemental tests like blood culture and Widal tube method.

**Advice:**

1. First week of fever: Blood Culture.
2. Second week of fever: Widal tube test.
